

Enhancements

to your natural gas system in Woodridge

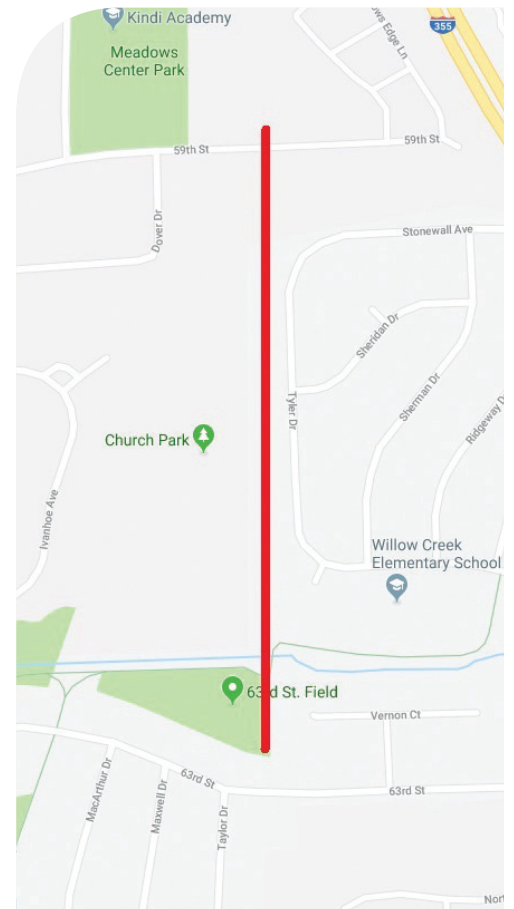

Delivering your natural gas is a responsibility we take very seriously. As part of our commitment to construct, operate, maintain and inspect our natural gas system to ensure safe and reliable service to our more than 2.2 million customers, we are making meaningful investments to modernize and improve our natural gas infrastructure.

Natural Gas Pipeline Replacement

Beginning in July 2018, Nicor Gas will be replacing approximately 2,500 feet of natural gas transmission pipeline located on property owned by Nicor Gas and ComEd. Where applicable, items such as swing sets, gardens, sheds, etc. must be removed from the Nicor Gas/ComEd right-of-way before construction begins.

To ensure safe access to the site during and after construction, Nicor Gas will need to remove bushes and trees from the area, including a 30-foot-wide corridor that will extend from Prentiss Creek north to 59th St. We plan to begin this part of the project in late April and expect it to be completed in approximately two weeks.

Construction is anticipated to conclude by September 2018. Nicor Gas customers will continue to receive natural gas service during the construction period and this project will not cause service interruptions. Nicor Gas is working with community leaders to reduce the impact construction may have on local roads and other pathways. Once the pipeline construction has been completed, Nicor Gas will restore the areas impacted by our construction with new plants and paving.

Areas Affected

This project will be completed within the Nicor Gas/ComEd right-of-way beginning north of 59th St. to north of 63rd St. There will also be construction activity and equipment south of Maple Ave. in preparation of the natural gas transmission line installation.
