Fueling our future

Leading the way with
energy efficiency, innovation,
and **sustainability.**

Innovative offerings–TotalGreen

Nicor Gas is accelerating toward a clean energy economy with a new offering that is designed to reduce or offset the environmental impacts associated with natural gas use.

TotalGreen is a pilot program that offers flexible options for customers who are interested in offsetting or reducing their carbon dioxide emissions with renewable natural gas (RNG) environmental credits and carbon offsets. RNG can provide a clean energy option that benefits our customers, our communities and our environment.

Learn more about TotalGreen at nicorgas.com/totalgreen.

Reaching net zero–Smart Neighborhoods™

Nicor Gas is partnering with Habitat for Humanity to develop two new communities in Illinois. The new **Smart Neighborhoods** will be in Aurora and Northern Fox Valley. They are designed to be net zero, which means they do not emit more carbon than they use.

The net zero communities are the first of their kind in the nation to be sponsored by a natural gas utility and leverage smart construction technologies to demonstrate both affordability and resiliency.

Learn more at ngsmartneighborhoods.com.

Gaining ground–Natural gas heat pumps

Gas heat pumps offer fuel efficiency above 100% and reduce greenhouse gas emissions. This technology provides more sustainable end uses and cleaner generation sources. Gas heat pumps are cost-effective options, helping customers significantly lower their energy bills.

Nicor Gas is proud to be a founding member of the **North American Gas Heat Pump Collaborative**, a nonprofit organization that is committed to advancing gas heat pump products and making this technology standard practice.

Nicor Gas is advancing natural gas technology for our customers.

Across northern Illinois, Nicor Gas is investing in innovative technologies that are designed to help customers meet their energy-saving goals. From residential communities to commercial facilities, we are proud to fuel our future.
