-------------------------	--

*MBTUH = 1,000 British Thermal Units per Hour

⁺Steam trap repair/replacement should be completed within 90 days of survey completion

[^]Pipe insulation projects are capped. Capped at \$15,000 or 35% of project cost whichever is less.

Take advantage of savings on qualifying equipment, services and products for your public or private commercial facility.

Follow three simple steps to receive your rebate:

1. Identify energy-saving opportunities

- Talk with your energy advisor or an approved contractor to identify qualifying projects.
- Work with your approved contractor to obtain project pre-approval from the program approval.

2. Install products

- Install qualifying products or improvements between January 1, 2026 and December 31, 2026.

3. Start saving right away

- You will receive the rebate as an instant discount deducted from your project invoice instead of having to apply for the rebate.

Find an approved contractor

To qualify for a rebate, all eligible energy-saving equipment and improvements must be installed or provided by a program-approved contractor.

The Nicor Gas Energy Efficiency Program team can assist you with identifying program approved contractor.
