

Switching to natural gas is as easy as 1, 2, 3!

Nicor Gas will...

You will...

Step 1 Complete the Application

A Nicor Gas new business coordinator will meet with you to discuss the appliance and installation process to help you switch to natural gas. We're here to help!

Complete the **Single Meter Service Request** form for new customers at nicorgas.com/newservice.

Step 2 Design, Estimate and Prepare for Installation

Nicor Gas will use the information from your application to design the natural gas service.

Nicor Gas will obtain any necessary approvals and permits, and supply you with a cost estimate for any additional service pipe that may be required.

Prepare your location for installation. Consult with a qualified plumbing or heating contractor to arrange for the installation of any gas appliances you require, the gas fuel line from your natural gas meter to those appliances and acquire applicable permits.

Step 3 Install Gas Piping, Appliances and Natural Gas Meter

Nicor Gas will install the service pipe between the Company's natural gas main and your property line, up to the natural gas meter.

Work with your contractor to connect the piping between the natural gas meter and the gas fuel line to your appliances.

You are now ready to enjoy the comfort, convenience and reliability of natural gas!

For a more detailed step-by-step guide, please visit nicorgas.com.

If you have questions related to the application form or installation process, please contact your Nicor Gas new business coordinator.

Government codes and regulations govern the installation of gas piping and appliances. Consult with your location permitting agency to determine the codes and regulations in effect. Nicor Gas is required to install gas service pipe under the Rates, Riders, and Terms and Conditions of the company on file with the Illinois Commerce Commission, including Rider 4-Gas Service Pipe.
